# Problem Statement

- **Socialtext platform**, is a web-based spreadsheet application that allows collaborative editing and data manipulation. Despite its innovative approach to collaborative spreadsheets, SocialCalc has become outdated, and there is a growing need for a modern.
- By redeveloping SocialCalc using modern languages such as Node.js, we can enhance its performance, security, and scalability, making it a more robust tool for collaborative data management.

# Solution

- Developed an innovative spreadsheet application using Node.js
- Enables real-time collaboration among users
- Features a scalable architecture to handle growing data and user needs
- Includes a responsive user interface for seamless interaction across devices
- Created an interactive and modern interface to increase the use interest.
- Allows integration with external APIs for enhanced capabilities

# USP

- **Real-Time Collaborative Editing:** "Empower your team with real-time collaborative editing. Watch changes happen instantly, ensuring everyone stays on the same page and productivity reaches new heights."
- **Advanced Functional Capabilities:** "Unlock the full potential of your data with a suite of powerful functions tailored to optimize and streamline your workflow directly within the spreadsheet. These advanced features are designed to simplify complex calculations and enhance productivity."
